

NAVEEN PERAM

Dallas, TX • peram.naveen12@gmail.com • +1 (945) 527-0685 • [linkedin/naveen-peram](https://www.linkedin.com/in/naveen-peram)

PROFESSIONAL SUMMARY

Principal Platform Engineer with 11+ years bridging Software Engineering, SRE, and Cloud/Data Infrastructure. Specializes in architecting global-scale AWS Landing Zones, GenAI-enabled developer platforms, and event-driven data ecosystems that empower 100+ engineers to ship at velocity. Expert in eliminating operational toil through IaC, Policy-as-Code, and self-healing architectures across Kubernetes and event-driven systems. Certified across 4 AWS domains with a proven record of leading enterprise migrations, FinOps transformations, and ML platform modernization.

CORE COMPETENCIES

AI / GenAI & MLOps: Amazon Bedrock, SageMaker Pipelines, RAG Architectures, LLM Integration, Vector Stores (OpenSearch), Amazon Q Developer, LangChain, Prompt Engineering

Cloud Platforms (AWS): EKS, ECS, Lambda, Fargate, EC2, S3, RDS/Aurora, DynamoDB, VPC, CloudFront, Route53, API Gateway, Transit Gateway, SQS, SNS, EventBridge, Step Functions, Glue, Athena, IAM, KMS, WAF, CDK

Infrastructure & IaC: Terraform (TFE / Sentinel), AWS CDK (TypeScript), CloudFormation, Ansible Tower, AWS Service Catalog

CI/CD & DevOps: GitLab CI/CD, Bitbucket, Jenkins (Shared Libraries), Azure DevOps, GitHub Actions, CodePipeline / CodeBuild / CodeDeploy

Data & DataOps: Snowflake, dbt Cloud, IICS / Informatica IDQ/MDM, PySpark, PostgreSQL, MSSQL, SAP BODS, Redwood RunMyJobs, Control-M

Containers & Observability: Kubernetes (EKS, OpenShift), Docker, ECR, Splunk, CloudWatch, AppDynamics, Elasticsearch, Prisma Cloud (CSPM), CyberArk, Okta

Languages: Python, TypeScript, NodeJS, Java, Groovy, Shell (Bash), C++

PROFESSIONAL EXPERIENCE

Lead Cloud Infrastructure SRE & DevOps Engineer | **First Citizens Bank** | Dallas, TX (Remote) | Jun 2022 – Present

Consultant via Fusion Global Solutions — Architected a global multi-account AWS Data Cloud Platform supporting 100+ data engineers and scientists on mission-critical ML and data workloads.

- **AI-Powered Developer Portal:** Designed an internal PaaS using Amazon Bedrock and AWS Service Catalog, enabling self-service provisioning of SageMaker environments and Snowflake sandboxes via LLM-driven workflows — eliminating 30+ manual SRE requests per month.
- **GenAI & RAG Infrastructure:** Built GenAI infrastructure on Amazon Bedrock (Claude, Titan) for RAG-based internal knowledge assistants; engineered embedding pipelines, OpenSearch vector stores, and LangChain orchestration deployed across 3 business units.
- **Global AWS Landing Zone:** Designed a Hub-and-Spoke multi-account ecosystem via Transit Gateway with centralized IAM governance and cross-account SCPs, standardizing infrastructure across 3 AWS regions for a global Data Cloud Platform.
- **IaC Governance & Policy-as-Code:** Integrated HashiCorp Sentinel in Terraform Enterprise to enforce security guardrails (S3 encryption, RDS public-access blocking); managed state refactoring across 50+ workspaces during large-scale migrations with zero drift.
- **AWS CDK Migration:** Migrated legacy CloudFormation stacks to AWS CDK (TypeScript) L3 constructs and Service Catalog products, reducing cloud infrastructure provisioning time by 40% and enabling full developer self-service for 100+ engineers.
- **Event-Driven ETL Architecture:** Engineered ephemeral, self-terminating PySpark compute (S3 Events → Lambda → dynamic EC2) with automated pre/post-processing, cutting idle compute costs by ~35% versus always-on clusters.
- **DataOps Automation:** Built multi-repo CI/CD pipelines (Azure DevOps + GitLab) automating Snowflake RBAC, Qlik deployments, and IICS mapping releases — compressing release cycles from multi-day manual processes to under 2 hours.
- **Hybrid Workload Orchestration:** Automated EDW workloads via Ansible Tower including SAP BODS ETL deployments and Redwood RunMyJobs scheduling across hybrid cloud and on-prem environments.
- **Disaster Recovery & Resilience:** Architected cross-region DR strategies automating failover of mission-critical data workloads and TFE state to secondary AWS regions, achieving <15-minute RTO for core platform services.

- **FinOps & Cost Optimization:** Implemented AWS Instance Scheduler for EC2/RDS lifecycle automation, delivering 30%+ reduction in non-production cloud spend estimated at \$200K+ annually.
- **Security & Observability:** Deployed Prisma Cloud for CSPM drift detection; architected SFTP ingestion gateways (AWS Transfer Family) with PGP encryption and Lambda@Edge for secure S3 presigned URL generation across enterprise financial data pipelines.

Senior Software Engineer – DevOps | **Silicon Valley Bank** | Bangalore, India | Jun 2019 – May 2022

Promoted from Software Engineer II (Mar 2021). Founded and scaled the DevOps practice from 1 to 10 engineers.

- **Team Building & DevOps Leadership:** Established the DevOps function from scratch — built hiring pipelines, mentoring programs, and standardized interview loops to scale the team from 1 to 10 engineers supporting rapid organizational growth.
- **Serverless DataOps & MLOps:** Architected multi-modal ingestion pipelines (SQS → Lambda → Glue → SageMaker) with Step Functions orchestration and Lake Formation for fine-grained data lake governance; enabled automated dataset routing to ML inference workflows.
- **CI/CD Pipeline Standardization:** Developed a centralized Jenkins shared library (Groovy) standardizing deployments across AWS, OpenShift, and on-prem — reducing deployment errors by ~60% and eliminating cross-environment toolchain fragmentation. Utilized Bitbucket as version control system to maintain the codebase.
- **Cloud Security Automation:** Implemented automated IAM least-privilege enforcement and compliance scanning across all AWS accounts; integrated security gates into CI/CD pipelines blocking non-compliant cloud infrastructure from reaching production environments.
- **Microservices Observability:** Rolled out AppDynamics APM and Splunk forwarder instrumentation across containerized microservices on OpenShift, providing end-to-end transaction tracing and reducing mean time to detect (MTTD) incidents by ~50%.
- **On-Prem to AWS Migration:** Led lift-and-shift and re-platform migrations of legacy on-prem workloads to AWS (EC2, RDS, S3), standardizing networking via VPC design, security groups, and NACLs while maintaining zero-downtime cutover for banking-critical services.

Associate Cloud Architect | **Microland Ltd** | Bangalore, India | Dec 2017 – May 2019

- **Cloud Foundation & Automation Portal:** Executed AWS Landing Zone baselining for enterprise clients and built a private cloud self-service portal (Python, Django, Terraform), reducing manual cloud infrastructure provisioning SLAs by 50%.
- **Containerization & Workload Deployment:** Implemented and operationalized production Docker, Kubernetes, and OpenShift workloads for multiple enterprise clients; authored runbooks and training materials adopted across the broader cloud engineering team.
- **Infrastructure Automation Scripting:** Developed Python and Ansible playbooks to automate server provisioning, configuration management, and patching across hybrid cloud environments, eliminating repetitive manual ops tasks for a team of 15+ engineers.
- **Enterprise Network & VPC Design:** Designed VPC architectures with public/private subnet segmentation, Transit Gateway peering, and site-to-site VPN connectivity for enterprise clients migrating from on-prem data centers to AWS.

System Software Engineer II | **Micro Focus (formerly HPE)** | Bangalore, India | Aug 2015 – Nov 2017

- **Product Engineering:** Delivered SiteScope monitoring product enhancements (Java, AngularJS, HTML) across 3 major releases shipped on schedule with full unit test coverage and code review compliance.
- **SRE & Incident Automation:** Triaged high-severity production incidents for enterprise monitoring customers and built Python automation scripts for recurring troubleshooting workflows, reducing MTTR by ~40%.
- **Performance Optimization:** Profiled and resolved memory leak and thread contention issues in the SiteScope Java backend, improving product stability and reducing customer-reported crash rates across large-scale deployments.

EDUCATION

Bachelor of Technology (B.Tech) — GPA: 8.25/10

National Institute of Technology (NIT) Warangal, India

CERTIFICATIONS

- AWS Certified DevOps Engineer – Professional
- AWS Certified Solutions Architect – Associate
- AWS Certified SysOps Administrator – Associate
- Certified Jenkins Engineer (CJE)
- CyberArk Certified Trustee
